

Autoclave/Incubator Deodorizers

Eliminate lab odors or refresh your lab with our deodorizers!

New laboratory deodorizers from Key Scientific are more effective than ANY other deodorizer! They are completely non-toxic to organisms in the incubator, too.

***In the autoclave: drop the capsule into the autoclave bag. The large size is adequate for large loads.**

***In the incubator: use any container, add a little water and place into the back corner of the incubator. You won't believe the difference!**

We have several options to choose from. Each jar contains 50 deodorizers.

<u>Catalog #</u>	<u>Description:</u>
