

KEY SCIENTIFIC PRODUCTS has been serving science since 1935. Dr. Hoyt and Dr. Levine pioneered the concept of rapid substrate testing in diagnostic bacteriology; a concept widely used today in clinical diagnosis, research, and teaching. The KEY system employs a variety of manual tests. The company organized in California and was moved to Texas in 1991. Since that time, a whole new series of chromogenic substrates has been developed for identification of anaerobes as well as other fastidious organisms.

QUALITY STATEMENT:

KEY SCIENTIFIC is committed to offering high quality products at reasonable prices. No product will be sold that does not meet the company's quality assurance specifications.
